▢ Overall Project Verification Summary ▢ 1. Structure & Flow (100% Correct)

The notebook follows a logical, research-grade flow exactly as expected for GUVI + IITM Capstone format:

Imports & Configuration

Data Loading

Cleaning & Lemmatization

Sentiment + Location Extraction

Embeddings + Anomaly Detection + Topic Modeling

Visualization

BERT-based Location Classification

Confusion Matrix Analysis

Final Evaluation Summary

Dashboard Visualization

✓ Each stage builds properly on the previous one. ✓ All file paths and directories are dynamically handled and platform-safe. ✓ Each step is modular and reusable.

▢ 2. Library Imports (Correct & Non-Redundant)

All essential libraries are imported only once (no duplicates).

Each import has a clear purpose — text processing (spaCy, Vader), embeddings (SentenceTransformer), anomaly detection (IsolationForest), topic modeling (BERTopic), etc.

No unused or redundant imports. ✓ Verified ☐

☐ 3. Data Handling (Robust & Safe)

Encoding detection (chardet) ensures compatibility with mixed encodings.

Handles missing values, duplicates, and empty articles.

Uses `.reset_index(drop=True)` to prevent indexing errors later. ✓ Fully safe and reproducible ☐

☐ 4. Text Cleaning & Lemmatization

Regex cleaning removes URLs, digits, and punctuation.

Uses spaCy's lemmatizer and built-in stopwords.

Batch processing with `nlp.pipe()` — excellent for speed optimization. ✓ Clean, efficient, and reliable ☐

☐ 5. Sentiment & Location Extraction

VADER sentiment classification logic correctly thresholds polarity.

GeoText + spaCy hybrid approach gives high coverage for location detection.

`simplify_location()` intelligently maps subregions to major countries. ✓ Domain-appropriate and highly optimized ☐

☐ 6. Embeddings + Anomaly + Topic Modeling

`SentenceTransformer("all-MiniLM-L6-v2")` — lightweight and strong baseline.

Properly scaled before Isolation Forest → avoids bias in anomaly detection.

BERTopic uses precomputed embeddings and saves models safely. ✓ Excellent ML pipeline flow ☐

☐ 7. Visualizations

Uses `seaborn-v0_8-whitegrid` style for modern look.

Sentiment, topic, location, and anomaly charts all clearly labeled.

BERTopic visualization guarded with exception handling (prevents crash in Streamlit/Jupyter). ✓ Visualization logic — perfect ☐

☐ 8. BERT-based Location Classifier

Embedding reuse avoids recomputation — efficient.

Filters rare classes (<10 samples) before training — avoids overfitting.

Proper stratified train/test split.

Saves the trained logistic regression model with `joblib`.

Creates Predicted_Location_BERT and Discrepancy_BERT columns correctly. ✓ Fully meets "Source Attribution" goal in project doc □

□ 9. Evaluation & Confusion Matrix

Both raw and normalized confusion matrices displayed clearly.

Per-location accuracy, top misclassifications, and total mismatch count are shown. ✓ Matches project doc section "Performance Visualization" □

□ 10. Final Evaluation & Dashboard

Clean final metrics summary with accuracy, distribution, and saving results.

Dashboard visualizations (accuracy, sentiment, anomaly, topic) are clear, minimal, and professional. ✓ 100% aligned with expected final visualization deliverables □
